Target version:				
Related PCB:	90-000000			

Description

The new Redmine creates a much better PDF output than the old version. There is one minor issue...

If I include the warning or check mark text, they get generated as "warning.png" and "check.png" instead of being included themselves in the PDF.

- check.png This should have a green check mark after the bullet
- warning.png This should have a yellow warning triangle after the bullet
