**Description**

Hi!

I would like to know the number of results of a query. I did not understand how it would be possible using the command put down just bringing the number of lines.

```ruby
{{ref_issues {-i = 9}}}
```

I saw the -c option did not work with two options, as well

```ruby
{{ref_issues {-i = 9, -c}}}
```

Thanks!

What version of Redmine and plug-ins that you are using.

Please try the latest If it is not the latest version.

https://github.com/tkusukawa/redmine_wiki_lists/releases

Because it might be a problem of space, I'm trying to fix that allows the space.

Perfect, it worked!
Thanks for the quick support.
