Description

Hello Haru Iida,

I've experienced a minor bug with your redmine plugin 'Code Review' (latest version, running on redmine branch 1.3.0). The bug appears when I go into open issues, and have a review associated with an issue. In the link that is listed in the issue, and this is followed and the diff rendered, the icon indicating the annotation in the diff is missing and on the bottom of the page (the footer), the following is stated:

Internal error

An error occurred on the page you were trying to access.
If you continue to experience problems please contact your Redmine administrator for assistance.

And if I look at the error log (ref: log/production.log) I get this:

Rendering /var/www/redmine/public/500.html (500 Internal Server Error)
I don't know what's wrong, and would really appreciate some help on this error.

If you need more information I'd be more than willing to give this to you.

Thanks in advance, and I look forward to hearing back from you.
